

# Setup Instructions for Skyscape Trekker and Skyscape Scout

## Setting Up Your Skyscape Tent.

Choose a campsite away from low hanging branches, and clear the ground of sharp objects such as sticks or rocks. Choose a site where water will **drain away** from the shelter. Avoid contact of the tent's floor with sharp or abrasive objects. The use of a footprint is recommended. Six Moon Designs offers Tyvek or Polycro footprints in various sizes.

1. Lay out your **Skyscape** with the Head pointing into the wind.
2. Extend all corner guy-outs to their maximum lengths.
3. Stake out rear corners 1 & 2 (Fig. 1) about 4' (122cm) apart.
4. Pull out and stake corner 3 (Fig. 1) centered between the two rear stakes. Leave slack so the canopy can rise when you set your poles.
5. Set your hiking pole length to **45 inches** (114cm)
6. Slide the provided spreader bar into the sleeve along the apex of the tent.
7. Insert the tip of pole into the pocket at the top of the door.
8. Insert the tip of pole into the pocket at the end of the spreader bar.
9. Slide the handle of the trekking pole into the pole cup at the bottom. (If using our optional tent poles put the grommet tip into the grommet located in the pole cup.)
10. Slide bottom of pole into place onto the floor reinforcement patch.
11. Repeat for other side of tent.
12. Stake out the vestibules (Fig. 1 corners 4&5).
13. With the tent setup, adjust the position of your stakes as needed.

### Notes:

- For increased stability in windy conditions there is an additional tie out at the rear of the shelter.
- Check out the **FAQ** section of our website for more information on the best use of your new shelter.
