

HILLEBERG

THE TENTMAKER

WHAT'S NEW FOR 2020

Anaris

Lightweight, roomy, simple to pitch and impressively versatile, the Anaris is ideal for warm-weather backpacking or trekking.

1 & 2 The Anaris can be pitched with trekking poles or by suspending the ridge corners from trees or other supports.

3 & 4 When fully buttoned up, the Anaris's outer tent offers impressive weather protection. And when both doors on both vestibules are completely rolled away, the inner tent's full mesh ends provide equally impressive venting.

5 & 6 For maximum air flow, either one or both of the Anaris's outer tent walls can be rolled away. For one side, simply drape the wall over the other side. For both sides, roll both walls up to the ridge and secure.

7 Both the Anaris outer and inner tents can be used on their own. The outer weighs just 640 g (1 lb 7 oz), and makes a remarkably versatile tarp, while the inner pitched alone offers breezy bug protection for the hottest weather.

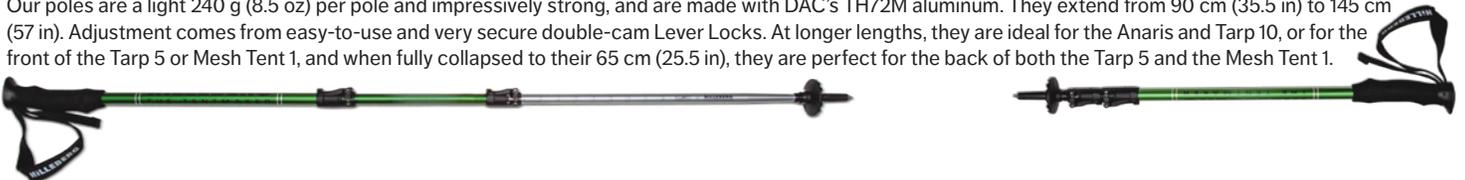

Hilleberg Tarp Pole 2.0

Designed for use with Tarps, Mesh Boxes and as the center pole for the Altai, the new 19 mm Tarp Pole 2.0 is a two-section pole that is both strong and light. Weighing 335 g (11.8 oz), it folds to 66 cm (26 in) for packing, can extend from 124 cm (49 in) to 210 cm (82.5 in), and has a reversible, screw-in tip that can be used with fabric pockets (such as on the Altai), or with rings or loops (as on the Tarps and Mesh Boxes).

Hilleberg Trekking Poles

We knew that our new Anaris would be built around a trekking pole pitch, so we wanted to offer our own trekking poles, as well. We wanted poles that would be outstanding for hiking and that would also work seamlessly with our Anaris, Tarps, Mesh Tent 1, Mesh Boxes and Mesh Ridge. Bo Hilleberg had been hiking with DAC-produced trekking poles and declared them the best he'd used, so collaborating with our long-time partner DAC for our own Hilleberg poles made perfect sense. Our poles are a light 240 g (8.5 oz) per pole and impressively strong, and are made with DAC's TH72M aluminum. They extend from 90 cm (35.5 in) to 145 cm (57 in). Adjustment comes from easy-to-use and very secure double-cam Lever Locks. At longer lengths, they are ideal for the Anaris and Tarp 10, or for the front of the Tarp 5 or Mesh Tent 1, and when fully collapsed to their 65 cm (25.5 in), they are perfect for the back of both the Tarp 5 and the Mesh Tent 1.

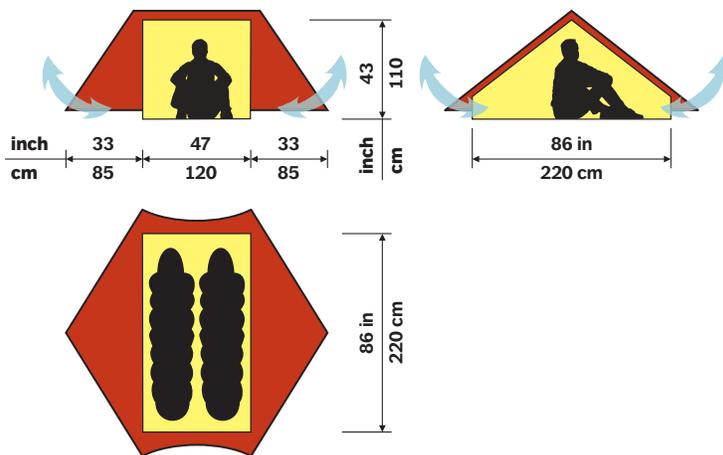

ANARIS

YELLOW LABEL

- > 2 person
- > Very light, roomy, remarkably strong and versatile ridge tent for warm weather adventures.

Minimum Weight:	1.3 kg/2 lbs 14 oz
Packed Weight:	1.4 kg/3 lbs 1 oz
Inner Tent Area:	2.6 m ² /28 ft ²
Vestibule Area:	2 x 0.9 m ² /2 x 9.7 ft ²
Poles: (not included)	use 2 trekking poles set to approx. 125 cm (49 in) – 130cm (51 in)
Pegs	12 Y-Peg UL
Colors:	Green, Red, or Sand 

- » Ridge tent construction, designed to be pitched with trekking poles or by suspending the ridge corners, provides simplicity, ease of set up, and versatility.
- » Plenty of room for two plus gear, and a veritable mansion for one.
- » Designed for warmer climates and for the snow-free months of the year.
- » Dual entrances and vestibules provide flexible entry/exit, venting, and spacious storage options.

- » Kerlon 1000 outer tent fabric is very light yet has an impressive 8 kg/17.5 lb tear strength.
- » Both doors on both vestibules can be partially or fully rolled away, and either or both of the sides can be completely rolled up.
- » Linked inner and outer tents allow either simultaneous pitching or separate use for the greatest versatility.
- » Used on its own, the outer tent becomes a very lightweight (640 g/1 lb 7 oz) yet “supercharged” tarp, thanks to its multiple options for rolling the ends or the sides.
